PROJECTS & PRACTICAL EXPERIENCE

Rakshak AI – Intelligent Disaster Management System (In Progress) | *Python, Flask, SQLite / SQLAlchemy, HTML, CSS*

- Working on a web-based application designed around disaster-management workflows.
- Developed and worked on user registration, login and dashboard modules.
- Used Flask routes and database integration to support core application functionality.
- Designed a dark, radar-inspired dashboard interface and continued enhancing the project.
- Exploring SOS reporting and related user-centered disaster response workflows.

AI-Powered Smart Campus & Placement Ecosystem (In Progress) | *Python, Flask, SQLite, HTML, CSS, JavaScript, AI integration*

- Developing a campus and placement ecosystem concept with student-focused digital workflows.
- Working on the application foundation and exploring AI-assisted features.
- Project is actively under development; features and implementation are being refined.

CodeAlpha E-Commerce Store – Full Stack Web Application | *Python, Django, HTML, CSS, JavaScript, SQLite, Git & GitHub*

- Built a full-stack Django application with product listings and product detail pages.
- Implemented shopping cart operations including adding products, quantity management and removing items.
- Added wishlist, product reviews, checkout, order processing, tracking and cancellation workflows.
- Created administrative functionality for managing products, inventory and orders.
- Implemented product search, filtering, sorting and category management.
- Used SQLite for data management and Git/GitHub for source control and project hosting.

SocialConnect – Social Media Platform | *Python, Django, SQLite, HTML, CSS*

- Built a social networking application with user registration and authentication.
- Implemented profile and post-related features, with social interactions such as likes and comments.
- Organized the project as a database-backed Django web application and published the code on GitHub.

TaskFlow – Project Management Tool | *Python, Django, SQLite, HTML, CSS*

- Created a project/task management application for organizing work and tracking tasks.
- Used Django and SQLite as the application and data layer; project code is available on GitHub.
